PROCEEDINGS AND DEBATES OF THE 109th CONGRESS, SECOND SESSION

Vol. 152

WASHINGTON, TUESDAY, APRIL 4, 2006

No. 41

House of Representatives

STATEMENT OF CONGRESSMAN ED CASE OF HAWAII TUESDAY, APRIL 4, 2006

COMMENDING THE PEOPLE OF THE REPUBLIC OF THE MARSHALL ISLANDS FOR THE CONTRIBUTIONS AND SACRIFICES THEY MADE TO THE UNITED STATES NUCLEAR TESTING PROGRAM IN THE MARSHALL ISLANDS

Mr. Speaker, I rise in support of H. Res. 692, a resolution introduced by my esteemed colleague from American Samoa and Ranking Member of the House International Relations Subcommittee on Asia and the Pacific--Congressman Eni Faleomavaega--commending the people of the Republic of the Marshall Islands for their incalculable contributions and sacrifices they made to the United States nuclear testing program throughout the 1940s and 1950s in the Marshall Islands.

This year will mark the 60th anniversary of the United States' commencement of nuclear testing in the Marshall Islands. Over a period of twelve years, from 1946 to 1958, the United States of America conducted sixty-seven atmospheric nuclear weapons tests in the Marshall Islands. The tests resulted in a combined yield of 108 megatons, roughly the destructive force of over 7,000 times that of the bomb used on Hiroshima. The worst of these tests, the Bravo shot, was a 15-megaton thermonuclear device, which in itself carried 1,000 times the destructive power of the Hiroshima bomb. It was detonated on March 1, 1954, on Bikini Atoll, and caused dangerous levels of radioactive fallout to be released over 7,000 square miles, including the populated atolls of Rongelap and Utrik.

It is vital that our country remember the contributions of the Marshallese to our national secu-

rity and to world peace.

While recognizing such contributions, our country over the years has sought to address the legacy of our nuclear testing in the Marshall Islands in our initial Compact with the Republic of the Marshall Islands in 1986 and in our ongoing bilateral relations with the RMI government. Just recently, our governments renegotiated the compact agreement.

I am aware that the RMI government has filed a "changed circumstances" petition with the U.S. government, which still must be negotiated. It is time our country come to closure on the changed circumstances petition and address our country's long-standing nuclear legacy in the Marshall Islands and its ramifications on the lives of its residents, particularly those of the affected atolls. I also believe that we must ensure that the U.S. Department of Energy's medical assistance program is fulfilling its obligation to its beneficiaries in the Marshall Islands.

I urge my colleagues to support H. Res. 692 and to work on addressing these crucial remaining issues.

Mr. ABERCROMBIE. Mr. Speaker, I rise today in support of H. Res. 692, a resolution to commend the people of the Republic of the Marshall Islands for the contributions and grave sacrifices

they made to the United States nuclear testing program in the Marshall Islands.

In 1947, the Republic of the Marshall Islands (RMI) became one of six entities in the Trust Territory of the Pacific Islands established by the United Nations with the U.S. as the Trustee. This began a decades-long relationship between the U.S. and RMI that has proven to be resilient and enduring.

In particular, I'd like to highlight the U.S. nuclear testing program in RMI which began in 1946. Over the years, the U.S. detonated 67 nuclear weapons on the islands of Bikini and Eniwetok. These tests comprise 80 percent of all atmospheric tests conducted by the United States. On March 1, 1954, the hydrogen weapons test code-named "Bravo" yielded explosive power approximately 1,000 times greater than the weapon used in the 1945 wartime nuclear attack on Hiroshima, Japan. The Bravo test created a mushroom cloud 25 miles in diameter, produced a crater 6,000 feet in diameter, and vaporized 6 islands at the Bikini Atoll. Radiation from the test forced the evacuation of Marshallese and U.S. military personnel on Rongerik, Ujae, and Ailinginae. This responsibility shouldered by the Marshallese people allowed a majority of all tests to be conducted as far from densely populated areas as possible and helped bring about a peaceful end to the Cold War.

Over the years, the Marshallese have faced very serious consequences as a result of the nuclear testing. The health and property effects have proved to be extensive and in many cases, immeasurable. The U.S. has recognized this and set up a fund to compensate those affected by the testing. However, the consequences of this testing, especially the health of the Marshallese people, continue to be impacted.

In particular, the Section 177 Health Care Program is in urgent need of increased funding. Intended to provide comprehensive medical care, including cancer care, for the four communities most affected by the nuclear weapons testing program, this healthcare program has fallen woefully

short of its intended goals. Spending approximately \$12 per patient per month, the needs of this program are immediate and urgent.

Mr. Speaker, I am sure that our countries will continue to work on this issue and find a resolution. I also have no doubt that the relationship between our governments will continue to be productive and mutually beneficial. As our alliance continues in the coming decades, I urge the United States to step up and meet its obligations to the people of the RMI. With all the sacrifices they have made for the United States and continue to make each day, it is the very least the United States can do.

I urge my colleagues to join me in commending the people of the Marshall Islands and acknowledge their profound sacrifices. We must continue our efforts to restore the health and lands of the people of the Marshall Islands.
